

Metrc Support Bulletin

Bulletin Number: DC_IB_017	Distribution Date: 4/18/19	Effective Date: 4/22/19
Contact Point: Support@metrc.com	Subject: New Features Release	
Reason: Metrc is providing details on the newest feature releases for the system.		

Greetings Metrc® Users,

Metrc is pleased to provide information on our upcoming enhancements within the software. On **April 22nd, 2019**, the Edit Strains and Edit Items sections of Metrc will be updated to prevent the ability to modify the name of a Strain/Item once it has been used. Users with plants permissions will now have a change strains button to take corrective action on a plant if it was incorrectly identified under a different strain.

Any user with plants permissions will now be able to see two new columns for Group and Group Type within their Vegetative and Flowering grids. All users with packages permissions will now have a Source Package column within their Packages grid. Please see the sections below for detailed descriptions of these changes.

Edit Strains

Please note that if the following has **not** occurred, then strains will still be available to edit:

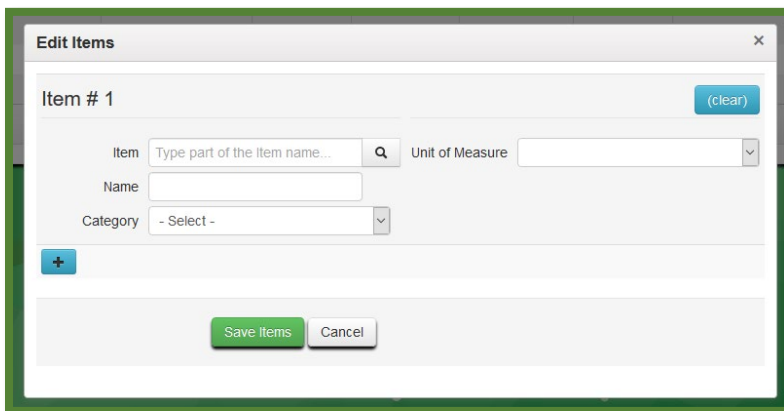

- A strain name has not been associated to an Immature Plant Batch or Veg/Flowering plant

***** If the strain has been used, the Name field would be restricted. Also, upon selecting Save Strains the user would receive an error. Other fields within the strain can be edited.***

Edit Items

Please note that if the following has **not** occurred, then items will still be available to edit:

- The item has not been previously used in a package
- The item has not been finished or discontinued

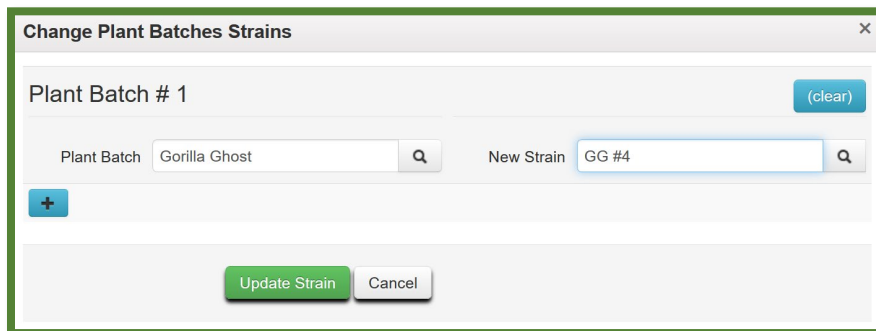

***** If the item has been used, the Name field would be restricted. Also, upon selecting Save Items the user would receive an error. Other required fields within the item can be edited.***

Changing Strains

If a user identifies that an incorrect strain was designated to an Immature Plant Batch or a Vegetative/Flowering Plant, they can select the Change Strain button.

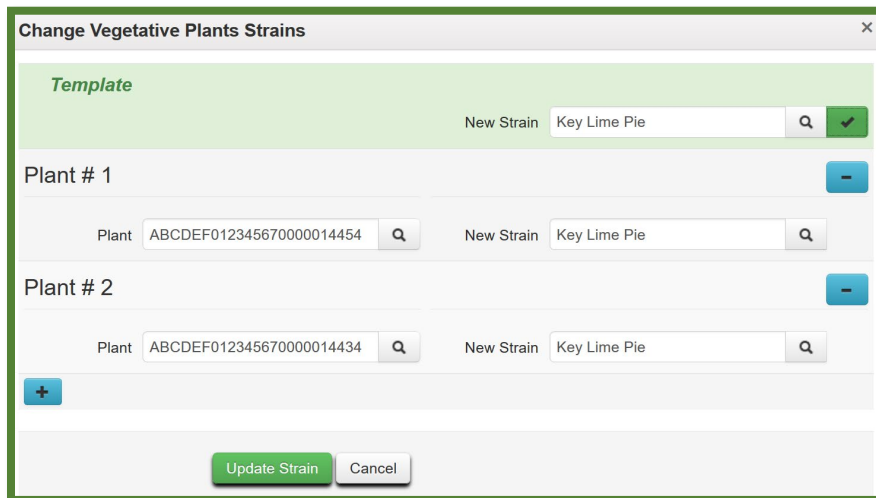

For Plant Batches, the user will be able to update the strain for the plant batch that was identified as incorrect. The "New Strain" option will be the selectable list of active strains created within the license.

The screenshot shows a dialog box titled "Change Plant Batches Strains". At the top, it says "Plant Batch # 1" with a "(clear)" button to its right. Below this, there are two search fields: "Plant Batch" with the value "Gorilla Ghost" and a magnifying glass icon, and "New Strain" with the value "GG #4" and a magnifying glass icon. A blue "+" button is located below the search fields. At the bottom of the dialog, there are two buttons: "Update Strain" (green) and "Cancel" (grey).

***** If some plants within the immature batch have been transitioned to a new growth phase, they will not be updated by the immature batch strain change.***

For Vegetative or Flowering Plant(s), the user will be able to select the plant(s) that were identified as incorrect. The "New Strain" option will be the selectable list of active strains within the license.

The screenshot shows a dialog box titled "Change Vegetative Plants Strains". At the top, there is a green bar labeled "Template". Below this, there is a "New Strain" field with the value "Key Lime Pie" and a magnifying glass icon, followed by a green checkmark button. Below the template section, there are two sections for individual plants. The first section is labeled "Plant # 1" with a blue "-" button to its right. It contains a "Plant" field with the value "ABCDEF012345670000014454" and a magnifying glass icon, and a "New Strain" field with the value "Key Lime Pie" and a magnifying glass icon. The second section is labeled "Plant # 2" with a blue "-" button to its right. It contains a "Plant" field with the value "ABCDEF012345670000014434" and a magnifying glass icon, and a "New Strain" field with the value "Key Lime Pie" and a magnifying glass icon. A blue "+" button is located below the plant sections. At the bottom of the dialog, there are two buttons: "Update Strain" (green) and "Cancel" (grey).

***** If multiple plants are selected, a template can be used.***

Group and Group Type Columns

Any user that has plant permissions will now see two additional columns within their Vegetative and Flowering grids. The Group column will indicate the Immature Plant Group that specific plant came from. The Group Type column will indicate whether the plant came from a seed or clone, which is designated during the immature planting section of Metrc.

Tag	Strain	Room	Hold	Group	Group Type	Group Date
▶ ABCDEF012345670000010002	AK-47	Veg Room B	No	AK-47 Clone 1/20/2017	Clone	01/20/2017

Source Package Column

Any user that has package permissions will now see an additional column within their Packages grid. The Source Package column will indicate to the user which package tag was used to create the current package. If multiple packages went into the creation of a new package, then the user will see (multi-package) opposed to a single tag. If a package wasn't created from another package, the area will be blank.

Tag	Harvest	Source Package
▶ 🔍 ABCDEF012345670000012988	(multi-harvest)	(multi-package)
▶ 🔍 ABCDEF012345670000012987 💧	Flo 6-11-2018	ABCDEF012345670000012971
▶ 🔍 ABCDEF012345670000012985	Blue Dream 013119
