

March 30, 2017

Franwell is pleased to announce some updates available in Metrc® on Thursday, March 30, 2017. Below details each of these updates:

Harvest Grid Reorganization

The Harvest grid columns have been reordered, and will be represented as the following:

- ❖ Harvest Batch – Name designated to the Harvest
- ❖ Room – Room where Harvest is located
- ❖ Strain – Strain of the Harvest
- ❖ Plants – Number of Plants in the Harvest
- ❖ Total Weight – will be renamed to "Wet Weight"
- ❖ Waste – amount of Waste reported with this Harvest
- ❖ Total Packaged Weight
- ❖ Packages – Count of Packages made from this Harvest
- ❖ Weight – Current weight, but will be renamed to "Moisture Loss" in Finished Harvest
- ❖ Restored – If Plants have been Discontinued, the amount will appear in this column
- ❖ Lab Testing – Status of Lab Testing of the Harvest Batch
- ❖ Administrative Hold – Is the Harvest On-Hold by the State
- ❖ Date – Date of the Harvest

Transfers

The following list of Transfers enhancements have been performed in Metrc:

- ❖ Performed some *major* internal optimizations within Transfers to improve the overall performance. Most Licensees should see an improvement when working in the Transfers area of Metrc.
- ❖ Added the generation date/time and time zone to all Transfer Manifest printouts.
- ❖ Added the Source Harvest to the Transfer Packages drill down – will show “multi-harvest” if Package originated from multiple Harvests.
- ❖ Added the full list of Source Harvests to the Transfer Manifest.

- ❖ Combined the License and Name of Origin, Destination, and Transporter (if applicable) fields into a single field (to optimize screen real estate).
- ❖ Restricted Transfer Destination licensees from viewing the whole Manifest
 - Destination Licensees will now only be able to view their portion of a Manifest.

Any questions about these updates can be directed to the Metrc Support Team by emailing support@metrc.com or calling 877-566-6506.
