

July 3, 2017

Franwell is pleased to announce the latest updates to Metrc® now available. See the descriptions and screenshots below for details on these new features.

Recover Your Username

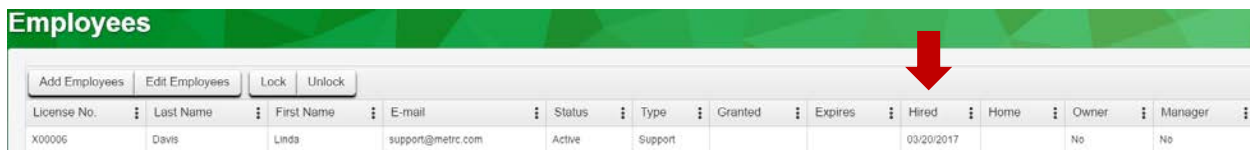

We have added the ability to recover usernames based on an e-mail address. Simply click on the “Don’t recall your username? Recover it” link located beneath the E-mail field on the Metrc Log in screen. An automated email will be sent to recover the Username.

The screenshot shows a login form with the following elements:

- Username field
- Password field
- Log in button
- E-mail field
- Links: [Don't recall your username? Recover it](#), [Can't access your account? Reset your password](#), and [First time users, use your log-in key](#)

We have also added a `Hired` column to all Employee grids. This date represents the date when the Employee was added to the Facility.

The screenshot shows the 'Employees' grid with the following columns: License No., Last Name, First Name, E-mail, Status, Type, Granted, Expires, **Hired**, Home, Owner, and Manager. A red arrow points to the 'Hired' column header. The data row shows: X00006, Davis, Linda, support@metrc.com, Active, Support, , , 03/20/2017, , No, No.

License No.	Last Name	First Name	E-mail	Status	Type	Granted	Expires	Hired	Home	Owner	Manager
X00006	Davis	Linda	support@metrc.com	Active	Support			03/20/2017		No	No

Updates to Transfers for Licensed Transporters

The Transfers form has been updated to accommodate transfers using a Licensed Transporter. The changes include reordering the driver and vehicle placement within the form. It is now located beneath the Destination, Planned Route, Transfer Type, Est. Departure and Arrival date and times.

Please note: If *not* using a Licensed Transporter, the Transport field should contain the License number of the transferring facility along with the driver and vehicle information, like you are used to entering. For those using a Licensed Transporter, the Transport field should contain the License number for the Transporter. Transporter License numbers (406-000XX and 406R-000XX-) are available in Metrc from the state licensing system and will be available to select.

Software Update Memorandum

If a Licensed Transporter will be storing product at their facility prior to deliver, the “Layover” checkbox will need to be selected. This will allow Estimated Date, Arrival and Departure times to be entered. Unless this box is checked, the Transporter will not have the ability to check the product in and out of their facility. It is the Licensed Transporter’s responsibility to communicate whether or not the marijuana will need a layover and will be stored at the Licensed Transporter’s licensed premises.

Remediation

Please remember when product needs to be remediated, the remediation process in Metrc is done **PRIOR** to any testing or test samples being made. Remediation should be done in Metrc while product has a status of Test Failed. We have received numerous calls where this process has not been followed and has caused significant delays in production for Licensees.

Testing Status Change

Additionally, as per recent changes, clicking the Production Batch button the testing status is now reset to “Not Submitted.” This change is to ensure that each Production Batch is treated as a new product and previous test results to not continue from testing of previous products.

Any questions regarding these updates can be directed to the Metrc Support Team at support@metrc.com or by calling 877-566-6506.
