

March 2, 2016

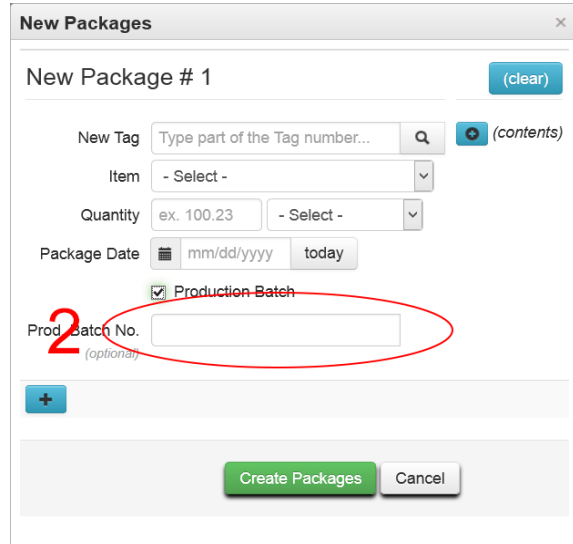

Franwell is pleased to announce some new features that are live in Metrc®. These features will continue to make Metrc more valuable in assisting you to manage your facility data and day-to-day operations. The information below outlines these new features as well as some bug fixes in the software.

## Production Batch Number

When creating a Production Batch package, you will now have a field to record the Production Batch Number. This field will accommodate 255 alphanumeric characters and should be used for the Production Batch Number used in your License business records and Labeling.

The screenshot shows the 'New Packages' form with the following fields: 'New Tag' (text input), 'Item' (dropdown), 'Quantity' (text input and dropdown), 'Package Date' (calendar icon, text input, and 'today' button), and a 'Production Batch' checkbox. A red circle highlights the 'Production Batch' checkbox, with the number '1' next to it.

The screenshot shows the 'New Packages' form with the following fields: 'New Tag' (text input), 'Item' (dropdown), 'Quantity' (text input and dropdown), 'Package Date' (calendar icon, text input, and 'today' button), a checked 'Production Batch' checkbox, and a 'Prod. Batch No.' text input field. A red circle highlights the 'Prod. Batch No.' field, with the number '2' next to it.

Additionally, you will also see a Production Batch No. column visible in your Package grid within Metrc.

## Transfer Manifests

Franwell has added the Quantity/Unit of Measure (UOM) to the Transfer Manifests. This feature was requested by numerous Licensees and will assist you in quickly identifying quantities when inspecting products in a Transfer.

## **Wholesale Transfer Report**

We have also added the Item name to package information within the Wholesale Transfer Report. This will give you more visible granularity to the information included within the report.

## **Additional Fixes**

The following fixes will also be included in this software release:

- The Session Timeout popup at times could lag after clicking "Extend Session." This has been optimized so as not to be an issue any longer.
- Filtering in the "Lab Testing" column within the Package grid has been updated to work correctly.
- The Facility Metrics report has been updated to accurately reflect all displayed data points.
