# Software Update Memorandum

August 29, 2016

Franwell is pleased to bring you the latest feature enhancements to Metrc®. The enhancements and descriptions are detailed below and will be available on Tuesday, August 30th:
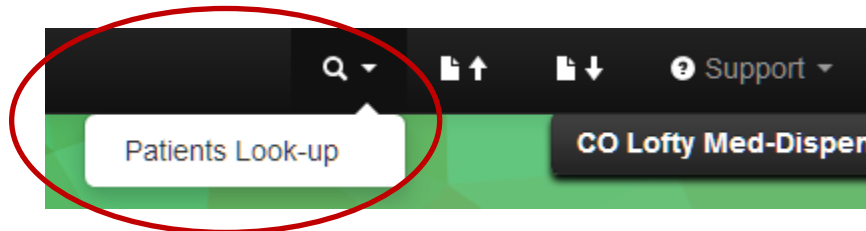

Alert for Expired/Expiring Patients

An alert for Patient licenses will now be visible, via the "Envelope" icon on the top navigation bar in your Metrc account. The alert will be for any Patient whose license will expire within 7 days. Additionally, it will also give you an updated number of Patients that have already expired, so you can update or remove them from your account.

Quick Patient Lookup

Metrc will now offer a Quick Lookup search for users to pre-check any new Patient before registering them as a Patient within an MMC. This function will be accessed through a search field identified with a magnifying glass on the top navigation bar next to the icons for data upload/download. By entering a Patient number, Metrc will search for, and display, any additional facilities where that Patient may be already registered.

Testing Results Report

A new report will be added to the Reports Control Panel. This report will allow Licensees to run reports on Sample Packages submitted for testing from their facility. The Testing Results Report will allow the user to filter by Package ID, Lab Testing State, Test Dates, Test Type and Package Date.

Any questions about these updates can be directed to the Metrc Support Team by emailing support@metrc.com or calling 877-566-6506.
