

<b>Bulletin Number:</b> MT_IB_38	<b>Distribution Date:</b> 3/14/23	<b>Effective Date:</b> Ongoing
<b>Contact Point:</b> Metric® Support	<b>Subject:</b> Tissue Culture Plant Batch Type	
<b>Reason:</b> Metric is providing an update on the addition of the Tissue Culture plant batch type that is available for use when creating an immature plant batch.		

Greetings Metric Users,

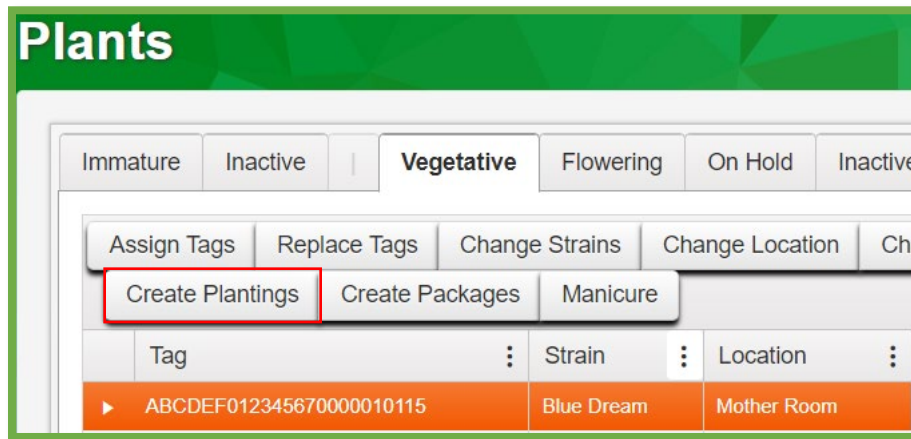

Metric in conjunction with the CCD are pleased to provide information on an update that will allow industry users to indicate that an immature plant batch is created from a Tissue Culture. If your facility is not using tissue cultures to produce immature plants, there will be no change to your processes.

Please see the following pages for additional information on the system changes.

## **Tissue Culture Plant Batches**

Cultivation licenses will now notice that when creating immature plant batches, there is now a new option for “Tissue Culture” plant batch types.

To use this new immature plant batch type, the user will follow the same process to create the immature plant batch, selecting the source plant and using the “Create Plantings” button. This step is shown below in **Figure 1**.

**Figure 1: Select Source Plant and Create Planting**

This button will trigger an action window where the user will enter all the information for the new immature plant batch. The user will now notice the addition of the “Tissue Culture” plant batch type. Once all the information is entered and verified as accurate the user will utilize the “Create Plantings” button to complete the process. This step is shown in **Figure 2**, below.

**Figure 2: Create Tissue Culture Planting Action Window**
