Streamline operations with RFID technology

Automate compliance while saving valuable time and money.

The Metrc difference

With evolving regulations across a range of jurisdictions, simplified, reliable processes are key to operational success and compliance.

With Metrc, businesses can benefit from the combination of two powerhouse technologies – *proprietary RFID-enabled tags and track-and-trace software* – to create operational efficiency and streamline regulatory reporting. Here's how:

Touchless plant and product management

- **Ready-to-use:** Tags arrive regulation-compliant
- **Robust:** Carries a complete history of the plant and product lifecycle through sale
- **Secure:** Nearly impossible to counterfeit

Automated data collection

- **Saves time:** Audit plants and products in minutes, not hours or days
- **Reliable:** Item-level tracking, real-time reporting
- **Cost savings:** Reduce data entry errors and labor
- **Efficient:** Line of sight not required for scanning plants and products

> In a recent field study, it took around **23 minutes** to audit a 3,000-plant cultivation room (**4.2x faster** than barcode and more than **20x faster** than manual data capture)*
> *Results may vary*

Monitor and manage plants, products, and inventory while protecting your brand. To ensure safe, smart, and compliant operations, and to remain competitive, licensed businesses can benefit quickly from adopting RFID technology.

Cultivators

- Move entire rooms of plants in minutes
- Harvest in a fraction of the time using integrated scales and scanners
- Locate plants using Real Time Locating Services (RTLS) capabilities
- Time savings offers ability to focus on other tasks

Manufacturers and Distributors

- Leverage data to make business decisions and track product performance
- Intake large shipments quickly and accurately
- Dramatically increase order fulfillment times
- Conduct full inventory counts in minutes instead of hours or days

Retailers

- Find information such as COA, strain name, potency, and harvest or packing dates
- Quick and efficient inventory counts
- Leverage data insights on product performance
- Sell safe products with confidence

RFID is changing the way businesses operate.

Metrc RFID Integrators

To realize the benefits of RFID in your business, check out our Metrc RFID integrator partners!

Canix

Canix is the leading cannabis ERP software for cannabis cultivators, manufacturers and distributors. Founded in 2019, the company serves both large commercial operations and standalone single-service operators. Canix provides a suite of tools for cannabis companies to operate efficiently and increase profit margins while remaining compliant with legislative authorities. With Canix, businesses have complete control over their real-time inventory and sales data.

Outlaw Technology, LLC

Outlaw Technology, LLC deploys best of breed RFID hardware and software systems, designed specifically for cannabis licensees with a direct API Metrc connection. The Desperado Handheld system is used by hundreds of licensees to capture Metrc plant and package tags for moves, audits, destruction as well as seek and find capabilities. Reduce harvest time by 80% with using OG Harvest, which links plant weight to Metrc RFID tags. To date Outlaw systems has managed over seven million plants with harvests more than six million pounds. We save you time, money and labor by eliminating manual capture and entry.
