

Bulletin Number: AK_IB_54	Distribution Date: 09/08/2023	Effective Date: 09/22/2023
Contact Point: Metrc Support	Subject: Harvest window and recording transfer route functionality updates	
Reason: Updates coming soon in Metrc		

Greetings,

Metrc is pleased to provide information on the latest system updates that will be available on September 22nd, 2023. Based on your feedback, AMCO has approved the following changes:

- Harvest window time frame extension
- Record transfer route details no longer required

Please read on for more information and contact support at support@metrc.com or 877-566-6506 with questions.

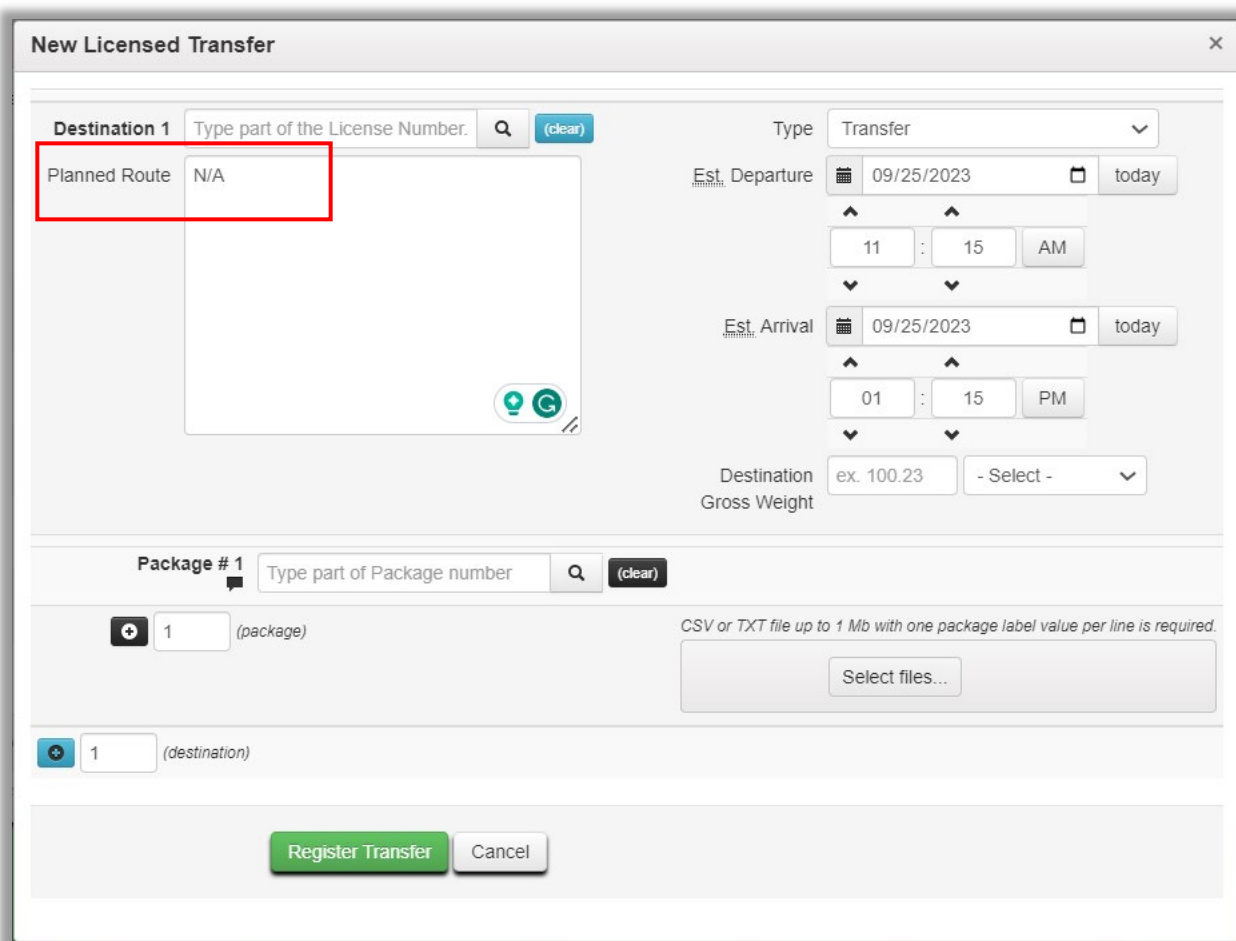

Harvest window time frame extension

Currently, a licensed Cultivation facility is required to create a single harvest batch for plants harvested within the same day.

Effective September 22nd, the timeframe for creating the single harvest batch for plants harvested is extended to a 72-hour period. **Please note:** The requirement for harvests to be created as strain specific remains unchanged.

Recording Transfer Route details

Effective September 22nd, when creating an outgoing transportation manifest, you are no longer required to record transfer route details in Metrc. While this is no longer a requirement, the planned route free text field must still be completed. You may still enter relevant transfer route details, or you may enter “N/A” or “Not Applicable” before finalizing all other required information and registering the transfer – **see Figure 1.**
