

Bulletin No: MI_IB_0077 Expired Product Functionality	Distribution Date: 12/22/2023	Effective Date: 12/22/2023
Contact Point: Metrc® Support	Subject: Expired Product Functionality	
Reason: Metrc is providing notice of disablement of the Expired Product Functionality.		

Greetings,

Metrc wants to provide an update regarding the optional Expired Product Functionality, which originally went into effect on September 18th, 2023, for infused edible products including the following item categories:

- Infused Liquid (each)
- Infused-Edible

In light of reported issues with the optional expiration date field, as of December 22, 2023, this optional functionality will be deactivated in Metrc and the previously entered expiration dates will be removed by year's end. As a reminder, this functionality does not have any impacts on your regular workflows and does not change the physical labeling requirements for your products.

Metrc will provide an update when the functionality is re-enabled and include additional enhancements to the functionality in a future bulletin.
